## FOREWORD

THE 1951 Census Tabulation Plan did not provide for the classification of the economically active and the inactive population by age-groups for each sex. As this is one of the recommended tabulations of the United Nations Population Commission\*, it has been taken up for U. P., West Bengal and Mysore from the Sample slips after the main Census tabulation. Similar tabulation for other areas may also be undertaken later, if found practicable.

These tables throw interesting light on the economic characteristics of the population. An attempt has been made to bring out the main features of the tables in the attached commentary. The tables also ought to provide much invaluable material for calculations relating to projections of the labour force. In making these computations, however, due allowance will have to be given for the errors that have crept in at the time of census in the enumeration of workers and non-earning dependants in some of the States, of which evidence is now available in these tables.

NEW DELHI:

*Dated, the 16th June, 1956.*

RAJESHWARI PRASAD,

*Deputy Registrar General, India.*

INTRODUCTORY NOTE	i—vii
TABLE I—Livelihood Classes and Sub-classes by Age Groups	1—41
TABLE II—Secondary Means of Livelihood by Age Groups	43—197
TABLE III—Workers in Industries and Services by Divisions and Sub-divisions according to Age Groups	199—331
<i>Subsidiary Tables</i>	
I-A—Self-supporting Males as percentage of Total Males in each Age Group by Occupational Classes	334
I-B—Self-supporting Females as percentage of Total Females in each Age Group by Occupational Classes	335
II-A—Male workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) as percentage of Total Males in each Age Group by Occupational Classes	336
II-B—Female workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) as percentage of Total Females in each Age Group by Occupational Classes	337
III-A—Distribution of 1,000 Self-supporting Males engaged in Industries and Services by Age Groups	338
III-B—Distribution of 1,000 Self-supporting Females engaged in Industries and Services by Age Groups	339
IV-A—Distribution of 1,000 Male Earning Dependants (according to Secondary Means of Livelihood) engaged in Industries and Services by Age Groups	340
IV-B—Distribution of 1,000 Female Earning Dependants (according to Secondary Means of Livelihood) engaged in Industries and Services by Age Groups	341
V-A—Distribution of 1,000 Male workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) engaged in Industries and Services by Age Groups	342
V-B—Distribution of 1,000 Female workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) engaged in Industries and Services by Age Groups	343
VI-A—Distribution of 1,000 Self-supporting Males in each Age Group by Industries and Services	344
VI-B—Distribution of 1,000 Self-supporting Females in each Age Group by Industries and Services	345
VII-A—Distribution of 1,000 Male Earning Dependants (according to Secondary Means of Livelihood) in each Age Group by Industries and Services	346
VII-B—Distribution of 1,000 Female Earning Dependants (according to Secondary Means of Livelihood) in each Age Group by Industries and Services	347
VIII-A—Distribution of 1,000 Male workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) in each Age Group by Industries and Services	348
VIII-B—Distribution of 1,000 Female workers (Self-supporting plus Earning Dependants according to Secondary Means of Livelihood) in each Age Group by Industries and Services	349
IX—Distribution of 1,000 Persons of each Age Group among Self-supporting Persons, Earning Dependants and Non-earning Dependants by Sex	350

## COMMENTS ON THE STATISTICS

The tables in this brochure present the classification of the economically active and the inactive population by age-groups for each sex in U. P. They have been prepared from the 1951 Census Sample Slips. At the very start of the 1951 Census sorting a 10 per cent. random sample of enumeration slips had been separated for each tract. While the other slips have been weeded out, the sample slips have been retained for purposes of additional tabulations and studies.

**The mode of Preparation of the tables**

2. At the time of the 1951 Census sorting three classes of tracts were formed—(i) Rural (ii) Urban City and (iii) Urban non-City. The present tables have been prepared for Rural and Urban City tracts only. The whole of the 10 per cent. sample slips have been employed for the preparation of the tables relating to cities. But these sample slips are not altogether identical with the sample from which the 1951 C-Series of tables were prepared. In one or two tracts the original got mixed up and a new sample was drawn for purposes of preservation. It is mainly on this account that some differences in the figures of the present tables and Table C-II of 1951 occur. For the preparation of tables of rural areas a random selection of 20 per cent. of the rural tracts (which are 221 in number) was made and the 10 per cent. sample slips of only these tracts processed.

3. The data derived from the special sorting are set out in three main tables and nine subsidiary tables. Except for the age-group-wise distribution Tables I and II are identical with Tables B-I and B-II of 1951 Census while Table III is a modified form of Table B-III of 1951 with the employment status columns omitted and new columns added for earning dependants (according to their secondary means of livelihood). In the main tables the data for the rural areas has been presented by the Census natural divisions also while that of the city tracts has been presented in four sub-divisions as follows:

- (i) K A B A L—Cities of Kanpur, Agra, Banaras, Allahabad and Lucknow;
- (ii) Class I Cities (over 100,000 population, including the KABAL Cities)—Kanpur, Lucknow, Agra, Banaras, Allahabad, Meerut, Bareilly, Moradabad, Saharanpur, Dehra Dun, Aligarh, Rampur, Gorakhpur, Jhansi, Mathura and Shahjahanpur;
- (iii) Class II Cities (between 50,000 & 100,000)—Mirzapur, Faizabad, Farrukhabad, Firozabad, Muzaffarnagar, Sambhal, Etawah, Amroha, Hardwar, Hathras, Budaun and Jaunpur;
- (iv) Class III Cities (under 50,000)—Pilibhit and Ghaziabad.

The data for individual cities has been retained in manuscript form in the office of the Registrar General, India.

4. The sample population for the purposes of the present tables works out as follows:

**Size of the Sample**

**RURAL**—1,021,497 (males 534,553; females 486,944) or 1.9 per cent. of the total rural population of the State.

**CITY**—439,612 (males 246,742; females 192,870) or 9.2 per cent. of the total city population.

5. As explained above the present city sample is almost the same as that employed for 1951 Census sorting. The present rural sample, however, is a smaller sample derived from the former 10 per cent. sample. It will be interesting to compare the demographic characteristics of this smaller rural sample with that of the former 10 per cent. rural sample for which figures are available for the 1951 census tables in respect of age composition and livelihood pattern.

**Comparison of the rural sample with the 1951 10 per cent. sample**

(i) *Age Composition*

6. The following table compares the age composition of the present rural sample population with that of the 1951 10 per cent. sample rural population.

TABLE 1

		Number per 100 of each sex								
Particulars		Under 15	15—19	20—24	25—34	35—44	45—54	55—64	65 & over	Age not stated
1		2	3	4	5	6	7	8	9	10
<i>Present Sample Population</i>										
Males	...	38.71	8.54	7.73	15.27	12.25	9.45	5.33	2.72	...
Females	...	40.38	8.14	8.69	14.89	11.37	8.50	4.94	3.09	...
<i>1951 Sample Population</i>										
Males	...	38.71	8.59	7.70	15.11	12.22	9.30	5.36	3.00	0.01
Females	...	38.28	8.48	8.51	15.16	11.63	8.67	5.15	3.50	0.02

The present smaller sample is quite consistent with the large sample of which it is a part.

(ii) *Livelihood Pattern*

7. A similar consistency is noticeable in respect of the distribution of 100 of each sex in livelihood classes, as the following table will show:

TABLE 2

		Number per 100 of each sex									
Particulars		All agricultural classes	I	II	III	IV	All non-agricultural classes	V	VI	VII	VIII
1		2	3	4	5	6	7	8	9	10	11
<i>Present Sample Population</i>											
Males	...	82.1	67.6	6.0	7.7	0.8	17.9	6.1	2.5	0.7	8.6
Females	...	83.4	9.8	5.8	6.6	1.2	16.6	5.7	2.3	0.6	8.0
<i>1951 Sample Population</i>											
Males	...	83.6	70.3	5.8	6.6	0.9	16.4	5.9	2.4	0.6	7.5
Females	...	84.3	71.0	5.7	6.4	1.2	15.7	5.6	2.2	0.6	7.3

8. In order to study the main features of these special tables a few subsidiary tables have been prepared showing the proportion of economically active persons—males and females separately—in each age-group by rural areas and cities, by occupational classes and by industrial divisions.

9. The following table compares the proportion of economically active males in each age-group in U. P. (Subsidiary Table II-A), Mysore, West Bengal and some other countries for which figures are available.

Proportion of economically active males in each age-group compared with that of other states and countries

<sup>a</sup>—The figures have been taken from Table 12, *Demographic Year Book, 1949-50*.

<sup>b</sup>—The figures have been taken from U. N. O. publication *The Determinants and Consequences of Population Trends* Table 24, page 195.

<sup>c</sup>—In case of West Bengal, Mysore and Uttar Pradesh data were available for males under 15 years of age; but not separately for those aged 10-14 years. In estimating the figures for ages 10-14, it has been assumed that all economically active persons under 15 years are 10-14 years old. Total males in age group 10-14 years have been arrived at by applying the proportion of age-group 10-14 to under 15 in 1951.

It will appear that among men aged 20-64 the proportion of economically active is uniformly high and shows little variation from country to country.\* The figures of Mysore and to some extent Bengal (Rural) have been vitiated by the enumeration of some workers, particularly of the unpaid family helper class, as non-earning dependants.

Among younger and older males there are significant variations. Generally speaking children under 14 begin work in earlier ages in the less developed agricultural countries than in the highly industrialised areas. Little relationship, however, is apparent between labour force participation rates for males 15-19 years of age and the degree of economic progress of the country. Differences in concepts of the labour force may be partly responsible for this feature. In the age-group 65 and over the figures are usually higher in the agricultural than in the industrially active countries.

**Proportion of Economically active females in each age-group compared with that of other states and countries**

10. Table 4 compares similar data for females. In the working age-group 20-64, the proportion of economically active females differs from country to country (unlike that of males). The U. P. rural proportion (42·6) may be taken as representative of India, the figures of West Bengal and Mysore having been vitiated by under-enumeration of workers. This proportion

TABLE 4

\*United Nations, *The Determinants and Consequences of Population Trends*, 1953, page 195.

NOTE: 1 The figures for foreign countries have been taken from Table 12, *Demographic Year Book*, 1949-50.

2 In case of West Bengal, Mysore and Uttar Pradesh data were available for females under 15 years of age; but not separately for those aged 10-14 years. In estimating the figures for ages 10-14, it has been assumed that all economically active persons under 15 years are 10-14 years old. Total females in age-group 10-14 years have been arrived at by applying the proportion of age-group 10-14 to under 15 in 1951.

compares with that of Germany, Japan, Sweden and France and is higher than that of England or U. S. A. In the age-group 15-19 the U. P. (rural) proportion is lower than that of most of the countries for which comparative data is available. In the age-group 65 and over the proportion is uniformly low. A significant point to note is that in U. P. the proportion of economically active females in urban areas is very small.

11. A comparison of the figures of U. P., Mysore and West Bengal in Tables 3 and 4 shows that the figures of Mysore and to some extent West Bengal (rural) are very much lower than that of U. P. A study of the Census figures of 1951 shows that the proportion of workers to the total population is unduly low in these two states as also in Bombay, Saurashtra, Bihar, Madras, Assam and Travancore-Cochin. The question arises whether these low proportions represent a genuine differential or arise from certain errors of omission and commission. So far as Mysore and West Bengal are concerned Tables 3 and 4 provide some significant evidence. The proportion of male workers to the total male population in the age-group 20-64 should be high (over 90%) in all countries. It is only about 80% for Mysore and 87% for West Bengal (Rural) as against 96% for U.P. (Rural). Similar deficits are observable in the case of these two states in the proportion of male workers in the age-groups 10-14 and 15-19. Table 4 relating to economically active females also shows similar deficits in the proportion of female workers in the various age-groups. The obvious inference is that some workers have been enumerated as non-earning dependants in these states. This is confirmed by a subsequent United Nations Survey in Mysore, the report of which has not yet been published. The principal error has been occasioned by the enumeration of unpaid male and female family helpers as non-earning dependants. As such helpers exist more in the rural than in the urban areas the error is more prominent in the former than in the latter. In U. P. where the possibilities of this error occurring were guarded against by the issue of supplementary instructions the figures appear to be quite consistent and almost free from this defect. On the whole there should not be any large differences in the pattern of the labour force in the various states of India.

**Low proportion of workers in certain states of India**

12. Table 5 presents the proportion of male workers in each age-group to total males in each age-group by natural divisions of the State for the rural areas. In the age-group under 15 the highest proportion (8.9) is returned by Hills and Plateau and lowest by Himalayan. The

**Proportion of male workers by age-groups in the Natural Divisions of U. P.**

TABLE 5

Natural Division	All ages	Under 15 yrs.	15-19 yrs.	20-24 yrs.	25-44 yrs.	45-64 yrs.	20-64 yrs.	65 yrs. & over	Age not stated
1	2	3	4	5	6	7	8	9	10
Uttar Pradesh ...	59.3	6.3	78.0	95.0	97.2	95.2	96.3	76.3	100.0
Himalayan ...	58.9	3.4	75.3	98.5	99.2	96.9	98.4	66.7	...
East Plain ...	58.2	7.6	79.4	95.4	98.3	97.2	97.5	80.5	...
Central Plain ...	59.7	6.5	77.0	94.5	96.8	95.2	96.0	78.0	...
West Plain ...	59.8	4.7	76.9	94.7	96.5	93.7	95.4	72.0	...
Hills & Plateau ...	60.5	8.9	85.7	97.2	97.9	95.9	97.3	75.8	100.0

reason for the high proportion in Hills and Plateau is that the average holding in this natural division is the largest in size demanding greater participation from family helpers. The low proportion of Himalayan is due to the higher incidence of primary education and to the high proportion of women workers. Similar trends are observable in the age-group 15-19 and for similar reasons. In other age-groups there are no marked differentials, except that the proportion of workers in Himalayan in the age-group 20-64 is slightly higher than the other natural divisions, which underlines the harder agricultural life of the Himalayan division occasioned by the terrain.

Proportion of female workers by age-groups in the Natural Divisions of U. P.

13. The proportion of female workers in each age-group by natural divisions given in Table 6 presents a very different pattern from that of male workers. It will be seen that the proportion of female workers of all ages is very high in Himalayan (56.7) and Hills and Plateau (47.4) and very low in West Plain (7.9). The low figure of West Plain is due to several reasons—

TABLE 6

Natural Division	All ages	Under 15 yrs.	15—19 yrs.	20—24 yrs.	25—44 yrs.	45—64 yrs.	20—64 yrs.	65 yrs. & over	Age not stated
1	2	3	4	5	6	7	8	9	10
Uttar Pradesh ...	25.1	3.2	32.5	38.0	45.3	40.5	42.6	15.2	...
Himalayan ...	56.7	5.6	84.7	93.1	93.7	79.9	89.8	18.9	...
East Plain ...	32.8	4.8	46.3	53.3	61.6	51.0	57.2	16.5	...
Central Plain ...	30.3	3.6	39.6	46.5	54.4	48.8	51.5	18.3	...
West Plain ...	7.9	0.8	8.5	10.3	13.2	16.6	13.6	8.6	...
Hills & Plateau ...	47.4	6.7	64.9	77.3	82.6	69.2	77.8	24.7	...

Muslim influence owing to proximity of Delhi, the seat of Muslim Emperors; preponderance of so-called high castes; and comparatively better economic conditions. The higher proportions of Himalayan and Hills and Plateau are due to the difficulties of the terrain requiring greater family effort in agriculture. In Himalayan the figures are also affected by the large exodus of males from their homes for earning a livelihood elsewhere.

Proportion of male workers by age-groups in the cities and rural areas of U. P.

14. Table 3 above gives the comparative proportion of male workers in each age-group in the cities and rural areas of U. P. The proportion of workers is smaller (54.9) in the cities than in the rural areas (59.3) for all ages and in each age-group. In the age-group 20-64 it is 88.8 for cities as against 96.3 for rural areas. But it should be noted that the proportion of workers in rural areas is augmented by family helpers and by earning dependants, many of whom are under-employed. Similar figures for female workers given in Table 4 underline the known fact that a very small proportion of women work in the cities unlike the rural areas.

Proportion of male workers by age-groups in the groups of cities of U. P.

15. Table 7 gives the proportion of male workers by four groups of cities. It will be seen that the proportion of workers for all ages is highest in KABAL Cities followed by first class cities, second class cities and third class cities. In third class cities the proportion of male workers in the age-group 15-19 is particularly low, which indicates a lack of employment scope for

TABLE 7

Particulars	All ages	Under 15 yrs.	15—19 yrs.	20—24 yrs.	25—44 yrs.	45—64 yrs.	20—64 yrs.	65 yrs. & over	Age not stated
1	2	3	4	5	6	7	8	9	10
All Cities ...	54.9	4.7	47.1	77.8	93.1	88.0	88.8	58.2	25.0
KABAL Cities ...	55.9	4.1	45.0	75.5	93.3	88.3	88.5	58.1	...
First Class Cities (including KABAL Cities) ...	55.4	4.8	46.6	77.2	93.3	87.9	88.8	58.0	23.1
Second Class Cities ...	52.4	4.6	50.5	81.2	92.1	88.4	89.1	58.6	28.6
Third Class Cities ...	51.0	1.9	35.3	79.1	91.2	83.8	86.9	61.9	...

males of this age-group. Of the other age-groups 25-44 is particularly important. The proportions in this group descend with the class of cities. This greater scope of employment in the larger cities partly explains the present trend of urban development.

Proportion of workers by age-groups in the occupational classes

16. Subsidiary Tables II-A and II-B give the proportion of workers in each group by occupational classes.

**Males**—In the rural areas, the participation of males of ages under 15 years and 15-19 years in the labour force is governed in the agricultural classes by economic gradation. It is the highest in Class III—cultivating labourers—followed by

**Class II—Cultivators of unowned land and Class I—Cultivators of owned land.** The same trend is observable in the age-group 20-64. In the non-agricultural classes the proportion in the lower age-groups is the highest in Class V—Production (other than Cultivation) and lowest in Class VII—Transport; while the proportion in the age-group 20-64 is nearly the same in Classes V-VII but strikingly low in Class VIII.

In the cities the proportion of male workers of the agricultural as well as the non-agricultural classes in the groups shows broadly the same trend as in the rural areas.

**Females—**In the rural areas, the proportion of female workers in the agricultural classes is governed by economic gradation as in the case of male workers. Only the disparities in the proportions of female workers of Class III and of other classes are more marked than in the case of male workers. In the non-agricultural classes the proportions of female workers are the highest in all age-groups for Class VIII, (owing obviously to the inclusion of general labourers in this class) followed by Class V.

In the cities the proportion of female workers is throughout very small. The only considerable figures are under Class III in agricultural classes and Class VIII in non-agricultural classes.

17. Subsidiary Table V gives the distribution of 1,000 workers engaged in industries and services by age-groups. The table will also give an idea of the contribution of each age-group to the various industries and services.

**Distribution of workers engaged in Industries and Services by age-groups**

**Males—**In rural areas in the age-group under 15 by far the highest proportion of male workers to the total workers of each Division is under Division 0—*Primary Industries not elsewhere specified*. These include stock raising, rearing of small animals and insects, plantation industries, forestry and wood-cutting, hunting and fishing. Division 1—*Mining and Quarrying* is a distant second. In the age-group 15-19 again Division 0 has the highest proportion of workers followed by Division 1 as a close second. As against this the proportion of workers in these two age-groups is the lowest in Division 8—*Health, Education and Public Administration* followed by Division 7—*Transport, Storage & Communications*.

In the cities the contributions of male workers of age-groups under 15 and 15-19 are the highest in Division 1—*Mining & Quarrying* followed by Division 9—*Services not elsewhere specified* and Division 4—*Processing and Manufacture, not elsewhere specified*. Division 9 includes general labourers.

**Females—**In the rural areas the largest contribution of lower age-groups is under Division 7—*Transport, Storage, Warehousing and Communications*, followed by Division 1—*Mining and Quarrying*, Division 0—*Primary Industries not elsewhere specified* and Division 5—*Construction and Utilities*. In the cities the proportion of female workers is the highest in Division 4—*Processing and Manufacture, not elsewhere specified* followed by Division 1—*Mining and Quarrying*.

**Table I-A—Self-supporting Males as Percentage of Total Males in Each Age Group by Occupational Classes**

Particulars	All ages	Under 15 years	15—19 years	20—24 years	25—44 years	45—64 years	20—64 years	65 years & over	Age not stated
1	2	3	4	5	6	7	8	9	10
<b>(I) Rural</b>									
<b>ALL CLASSES</b> ... ..	52.8	2.5	53.6	80.6	91.5	93.5	90.4	73.5	100.0
<b>All Agricultural Classes</b> ... ..	52.8	2.4	53.8	80.3	91.7	94.3	90.7	76.3	...
I—Cultivators of land wholly or mainly owned	52.6	2.3	52.3	79.6	91.9	95.4	91.1	80.6	...
II—Cultivators of land wholly or mainly unowned	57.5	1.9	58.7	86.0	94.5	95.8	93.7	73.5	...
III—Cultivating labourers	56.4	4.5	66.8	86.7	94.8	94.7	93.4	62.7	...
<b>All Non-agricultural Classes</b> ... ..	52.8	2.9	52.9	81.7	90.7	89.6	89.0	59.2	100.0
V—Production (other than cultivation)	54.0	3.0	54.3	82.2	93.0	94.2	91.6	66.9	...
VI—Commerce	52.7	2.1	49.5	83.6	93.8	95.4	92.8	69.1	...
VII—Transport	54.6	2.4	51.3	85.4	96.2	93.8	93.9	45.1	...
VIII—Other services and miscellaneous sources	51.9	3.1	52.9	80.7	87.7	84.6	85.7	50.7	100.0
<b>(II) Cities</b>									
<b>ALL CLASSES</b> ... ..	51.7	3.4	38.3	70.7	90.2	86.7	85.5	55.9	25.0
<b>All Agricultural Classes</b> ... ..	30.1	2.5	14.7	26.2	63.0	65.2	52.6	38.6	...
I—Cultivators of land wholly or mainly owned	38.4	2.9	18.2	31.4	75.2	86.6	64.3	62.2	...
II—Cultivators of land wholly or mainly unowned	39.2	1.7	23.1	51.0	77.6	89.3	75.6	54.1	...
III—Cultivating labourers	52.9	13.1	31.7	52.6	82.8	86.1	77.1	42.9	...
<b>All Non-agricultural Classes</b> ... ..	52.8	3.5	40.3	73.9	91.2	87.8	87.0	57.3	41.7
V—Production (other than cultivation)	55.4	3.1	46.1	79.5	93.2	91.5	90.1	63.9	66.7
VI—Commerce	49.2	2.4	33.7	67.6	91.6	92.5	87.6	73.3	...
VII—Transport	52.4	2.1	35.6	74.8	90.3	82.9	85.9	40.7	...
VIII—Other services and miscellaneous sources	53.0	4.8	40.3	72.4	89.7	83.6	84.7	46.3	100.0

NOTE: For working out the percentages, the self-supporting persons and earning dependants (according to secondary means of livelihood) of Class IV and of non-productive sources of Class VIII have not been treated as economically active (workers at all) but as economically passive.

**Table I-B—Self-supporting Females as Percentage of Total Females in Each Age Group by Occupational Classes**

Particulars	All ages	Under 15 years	15—19 years	20—24 years	25—44 years	45—64 years	20—64 years	65 years & over	Age not stated
1	2	3	4	5	6	7	8	9	10
